

Neutralize EMF and EMR!

*"The head of a prominent cancer research institute issued an unprecedented warning to his faculty and staff Wednesday: Limit cellphone use because of the possible risk of cancer."
- USA Today*

XEMF Neutralizer application guidelines

Electropollution is a universal problem. Cell phones have received a lot of attention regarding the potentially harmful effects of electromagnetic fields (EMF) and electromagnetic radiation (EMR) but there are many more everyday items that expose us to electropollution.

If something has a battery or plugs in then it creates electropollution. To be safe use the Xedia XEMF Neutralizers.

For full protection follow these suggested guidelines.

	Number of XEMF Neutralizers needed	Where should I place the XEMF Neutralizers?
Electronics		
Cell phone	1	Centered on the back over the battery.
Cordless phone	2	One on the phone base and one on the handset over the battery or close to the antenna.
Telephone headset	1	On the speaker
Desktop computer	1	Front, top or side of tower.
Computer monitor	1	Bottom center of front.
Laptop computer	1	Center on LCD screen cover
Game station or other video game system	2	One on the base's bottom center and one for each hand help controller.
Television	2	One centered on the top and one centered on the bottom.
Stereo / DVD player	1	One for each component, centered on the top or bottom.
Ipod / MP3 player	1	One close to the battery.
CB / walkie talkie	2	One per hand held device close to the battery or antenna. One on the CB base.
Digital camera	1	One close to the battery.

Neutralize EMF and EMR!

Kitchen		
Microwave	2	One centered on the top close to the door seal. One centered opposite the door hinge side close to the door seal.
Toaster	1	One centered on the front. (do not adhere where it gets hot or near the toast slots)
Blender	1	One centered on the front.
Coffee maker	1	One close to the on/off switch.
Toaster oven	1	One on a surface that does not get hot.
Bedroom		
Alarm clock	1	One centered on the front or top.
Bathroom		
Hair dryer	1	One on the handle or motor.
Appliances		
Vacuum cleaner	2	One chip on the handle and one chip centered on top of housing.
Automobile		
	2	One on driver's dashboard and one on passenger's dashboard.

All electronic items create electropollution, there are more items than those listed here. You will want to place an XEMF Neutralizer on any electronic device that you use regularly. The larger items may require two for full protection.
